Address

House No. 1127/1, Dua Cottages, Dewandas Street, Hassan Chowk, Old Sukkur

Education

B.E. Software Engineering

2024 - 2028 | 4th Semester

Quaid-e-Awam University of Engineering, Science & Technology, Nawasbshah

Technical Skills

- Proficient in C, C++, and Java programming
- Object-Oriented Programming (OOP) concepts and implementation
- Java Development using Java Swing for GUI applications
- Backend development with Java Spring Boot
- Database management using MySQL
- SQL queries, database design, and CRUD operations
- Frontend development with HTML, CSS, and JavaScript
- Basic understanding of Web Development concepts
- Understanding of Data Structures and Algorithms fundamentals
- Familiar with Software Development Life Cycle (SDLC)
- Version control using Git/GitHub
- Ability to write clean, maintainable, and structured code

Language

- English
- Urdu

Projects

Department Management System

- **Tech Stack:** Java, JSP, Servlet, MySQL, JDBC, Apache Tomcat, Maven, CSS, JavaScript.
- Built a web-based Department Management System deployed on Apache Tomcat, enabling role-based access for Admins, Teachers, and Students. Implemented full CRUD functionality for managing students, teachers, and courses, with a relational database schema supporting foreign key constraints between entities. Handled result management including sessional, mid-term, and final marks tracking per student per course. Configured the project using Maven and followed a standard MVC architecture with JSP for views and Servlets for request handling.

Bank Management System

- **Tech Stack:** Java, Java Swing, MySQL, JDBC
- Developed a desktop-based Bank Management System as part of Software Engineering coursework, implementing core banking operations including account creation (Current/Savings), fund deposits, withdrawals, and inter-account transfers. Built a two-interface application — a Bank Services panel and an ATM simulation — using Java Swing for the GUI and MySQL for persistent data storage via JDBC. Designed and normalized the database schema to handle account records with validation constraints.
